### DETAILED ACTION

The instant application has been filed with pending claims 1-11 and one (1) sheet of drawing.

The abstract of the disclosure is objected to because 1) it contains text other than that related to the abstract.

A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

Correction is required. See MPEP § 608.01(b).

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The narrow limitation "in particular for systems containing ... polymers render indefinite the broad limitation" for heat-curable carboxyl-containing polymers" of claim 1.

The narrow limitations "preferably of at least 130<sup>0</sup> C and, particularly preferably, of at least 140<sup>0</sup> C in lines 2-3 of claim 2 render the broad range at least 120<sup>0</sup> C indefinite.

The phrase "a compound analogous to the compound of formula (I) in line 2 of claim 4 lacks support from claim 1 that does not contain a compound of formula (I). It is noted that claim 3 has reference to the said compound of formula (1) limitation.

The "epoxy groups" appearing at the end of claim 4 appears to be in conflict with the remaining groups being in the form of glycidyl radicals" of line 4 rendering the claim indefinite.

The "preferably contains not more than 35 mol-% of epoxy groups" and the more narrower range "particularly preferably not more than 5 mol-% of epoxy groups" render claim 4 indefinite.

The narrow range limitation "preferably from 0.1% weight to 10% by weight", more preferably from 5% by weight" of claim 5 render the broad range "from 0.01% by weight to 20% by weight" indefinite.

The narrow range "preferably a phosphonium halide and, most preferably, an ethyltriphenylphosphonium bromide" renders indefinite the broad range "phosphonium salt" of claim 8.

Claim 11 is indefinite for failing to set forth any steps involve in the use of the crosslinking agent resulting in an improper definition of a process.

The narrow range "particular as hardener in systems containing ... polymers, preferably in corresponding ... paint systems, in particular powder coating compositions in claim 11 render indefinite the broad limitation "as hardener for heat-curable carboxyl-containing polymers".

Claim 11 provides for the use of a crosslinking agent as hardener, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 11 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd. App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim 4 recites the limitation "compound of formula I" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 4 recites the limitation "epoxy groups" in line 5. There is insufficient antecedent basis for this limitation in the claim.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the

remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 1 recites the broad recitation "heat-curable carboxyl-containing polymers", and the claim also recites in particular for systems ... polymers, which is the narrower statement of the range/limitation.

In the present instance, claim 2 recites the broad recitation "120<sup>0</sup> C, and the claim also recites preferably ... 130<sup>0</sup> C ... 140<sup>0</sup> C" which is the narrower statement of the range/limitation.

In the present instance, claim 4 recites the broad recitation "35 mol%, and the claim also recites particularly preferably ... 5 mol-%" which is the narrower statement of the range/limitation.

protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. Claims 1-11 are objected to for the 112 issues. However, the claims appear to be allowable over the prior art made of record that does not teach or suggest the catalyst being in a dispersed form in the crosslinking agent.

The prior cited but not applied further teaches crosslinking agents and their use in polymers of the same nature of the instant claims.
